Patching managements not all at ones this will result in many tickets for same reason
Can be done by each department

Installed action1 and shared through file share to access my domain on action1

The screenshot shows the Action1 console interface. The left sidebar contains navigation links: Dashboard, Vulnerabilities, Endpoints (selected), New Endpoints, Installed Software, and Update Approval. The main content area is titled 'Endpoints' and shows 'All managed endpoints on my network'. At the top, there's a search bar with 'CA-SD-01.homelab.com' and several filter dropdowns: Status: All, Updates: All, Vulnerabilities: All, OS: All, and Reboot: All. Below the filters are action buttons: '+ New Endpoint Group', 'Organize Endpoints', 'Deploy Software', 'Deploy Updates', 'Reboot', 'Run Script', and '+ New Automation'. A notification indicates '1 endpoint selected'. A table lists the endpoints with columns: Name, Comment, User, Status, Reboot, Endpoint Groups, OS, Vulnerabilities, and Missing Updates. The first row shows 'CA-SD-01.homelab.com' with status 'Connected', 'Not required' for reboot, and 'New Endpoints' for endpoint groups. The OS is 'Windows Server 2022', and it has '1 critical, 117 non-critical' vulnerabilities. The 'Missing Updates' column shows '1 critical'. At the bottom, there's a pagination bar showing '1 - 1 of 1' and a dropdown for '50'.

This will list all of required update by selecting and clicking deploy update

The screenshot shows the 'Missing Updates' page in the Action1 console for the endpoint 'CA-SD-01.homelab.com'. The top navigation bar includes 'General', 'Missing Updates' (selected), 'Vulnerabilities', 'Installed Software', and 'Automation History'. Below the navigation bar is a search bar and two filter dropdowns: 'Status: All' and 'Severity: All'. A notification indicates '1 update selected'. A table lists the updates with columns: Name, Installed Version, Latest Version, Release Date, Status, Update Type, and Vulnerabilities. The first row shows 'Microsoft Edge' with installed version '147.0.3912.98' and latest version '148.0.3967.54', released on 'May 7, 2026'. The status is 'New' and the update type is 'Security Updates'. The vulnerabilities listed are 'CVE-2026-7896, CVE-2026-7899, CVE-2026-7899... show all'. At the bottom, there's a pagination bar showing '1 - 1 of 1' and a dropdown for '50'.

Set automatically reboot, if required

Set message timeout to 1 hour

▼ Reboot options

☐ Do not reboot automatically

☒ Automatically reboot, if required [?](#)

☒ Show message and give logged on users time to save their work

Your computer requires maintenance and will be rebooted. Please save all work and reboot now to avoid losing any data.

Message timeout:

Auditing

If you need to report to someone you can head to

- Built-in reports
- Vulnerability management
- Vulnerability summary
- Tools – to download as HTML, CSV, PRINT IT, SAVE AS PDF
- Send it

The screenshot shows the Action1 Vulnerability Management interface. The breadcrumb trail is: Home / Vulnerability Management / Vulnerability Summary / CVE-2026-0390. The interface displays a comprehensive snapshot of unresolved vulnerabilities. A search bar and a dropdown for 'Responses: Live and Cached' are visible. The main table lists vulnerabilities with columns: Endpoint Name, Vulnerable Software, Vulnerable Version, and OS. The first entry is for endpoint CA-SD-01.homelab.com, showing Windows Server 2022 (version 21H2, OS build 20348.587). The page indicates 1 of 1 items and a total of 50 items.

Here is the information

Vulnerability Summary

Date/Time Generated: May 9, 2026 at 7:08:04AM
Filter Applied: None
Sort By: None
Response Type: Live and Cached
Total Items: 1

Endpoint Name	Vulnerable Software	Vulnerable Version	OS	Response Type
CA-SD-01.homelab.com	Windows Server 2022 (version 21H2, OS build 20348.587)		Windows Server 2022 (version 21H2, OS build 20348.587)	Live

This report was generated by Action1 platform (www.action1.com)

AND many different reports

The screenshot displays a list of system reports available in the Action1 platform:

- Disk Drives**: Shows disk drives with name, model, device id, interface type, size and serial number.
- Firmware**: Shows BIOS firmware information with BIOS manufacturer and version.
- HW Manufacturers**: Shows computers with manufacturer, model, number of processors, central processors size, disks size and type and system type.
- Hardware Summary**: Architecture, OS type, CPU type, number of cores and threads, type and amount of RAM, video and network hardware, motherboard.
- Installed Printers**: Views installed printers on remote computers with name, default setting and error description.
- Monitors**: Shows monitors information with name, description and screen resolution.
- Motherboards**: Shows motherboards with motherboard model, vendor and version.
- Physical Memory**

AntiVirus Status Report to give to auditors

You can assign roles

Here I assigned a role for editor and gave them permission to use scripts

Create New Role

Role name:

Editor

Description:

Permissions:

Permission	Include Scope	Exclude Scope	Actions
Use Scripts	Scripts: 3CX Desktop Vulnerability Remediation	Ad-hoc Script	

Add Permission ▾

Cancel

Create Role

Another feature is to include scope and exclude this will limit the scope of what they can access this is for security reasons preventing dangerous and unapproved scripts

Create New Role

Role name:

Editor

Description:

Use Scripts

×

View scripts in the Script Library in the specified scope. Include scripts from the Script Library or ad-hoc scripts in Run Script automations or in Additional actions of software repository packages.

Included scopes:

Script

3CX Desktop Vulnerability Remediation ▾

Include Scope

Excluded scopes:

Ad-hoc Script

Exclude Scope

Add

Cancel

For example here is a required update so we need to mark it deploy update

1 Remediation Actions

2 Deploy Updates

3 Schedule

Select remediation actions for each vulnerability

Deploy updates, if available, uninstall vulnerable software, or document compensating controls applied manually outside of Action1.

Mark as Deploy Updates

Mark as Uninstall Software

Mark as Document Compensating Controls

Remove from List

0 vulnerabilities selected

	CVE	Name	Update Available	Remediation Action
☐	CVE-2022-34301	Microsoft Server operating system-21H2	2022-08 Security Update for Microsoft server operating system version 21H2 for x64-based Systems (KB5012170)	Deploy updates

<< < 1 > >>

1 - 1 of 1

50

Cancel

Next Step

Have an option to deploy it to entire group or individual

1 Remediation Actions

2 Deploy Updates

3 Schedule

Select endpoints for update check and deployment

Updates will not deploy if already installed or non-applicable. No deployment for up-to-date or non-installed applications. Select any number of endpoints for comprehensive remediation.

Add Endpoints

Remove All

Name	Type	Status	Actions
All	Endpoint Group	none
